<p style="font-family: verdana"> Hello web development</p>

 font-size: it is a property to apply different font sizes for text

 size : percentage   20%

 size : length   20px

 size : names   larger, smaller

 size : inherit and initial properties

 initial : browser default (size)

 inherit : from the style of parent element

CSS -font-family:

The font-family property specifies the font for an element.

The font-family property can hold several font names as a "fallback" system. If the browser does not support the first font, it tries the next font.

There are two types of font family names:

family-name - The name of a font-family, like "times", "courier", "arial", etc.

generic-family - The name of a generic-family, like "serif", "sans-serif", "cursive", "fantasy", "monospace".

Start with the font you want, and always end with a generic family, to let the browser pick a similar font in the generic family, if no other fonts are available.

Note: Separate each value with a comma.

```
p {
    font-family: "Times New Roman", Georgia, Serif;
}
```

CSS -font-size:

This property will set size of the font .

medium
Sets the font-size to a medium size. This is default
